ANNUAL DRINKING WATER QUALITY REPORT

WINCHESTER

IL1710350

Annual Water Quality Report for the period of January 1 to December 31, 2021

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

The source of drinking water used by WINCHESTER is Ground Water.

For more information regarding this report contact:

Name: Adam Fox

Phone: 1-217-245-4146

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien.

SOURCE OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals. In some cases, the water may dissolve radioactive material. Water can also pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic system, agricultural livestock operations and wildlife;
- <u>Inorganic contaminants</u>, such as salts and metals, which may be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- <u>Pesticides and herbicides</u>, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses;
- <u>Organic chemical contaminants</u>, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff and septic systems; and
- <u>Radioactive contaminants</u>, which may be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPAs Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before from materials and components associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. http://www.epa.gov/safewater/lead. water, testing methods, and steps you can take to minimize exposure is available from the safe drinking water Hotline or at using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily

Source Water Information

Source Water Assessment

and documentation/recommendation of Source Water Protection Efforts; you may access the Illinois EPA website at http://www.epa.state.il.us/cgi-bin/wp/swap-fact-sheets.pl. meetings. The source water assessment for our supply has been completed by the Illinois EPA. If you would like a copy of this information, please stop by City Hall, or call 1-217-We want our valued customers to be informed about their water quality. If you would like to learn more, please feel welcome to attend any of our regularly scheduled 742-3191. To view a summary version of the completed Source Water Assessments, including: Importance of Source Waters, Susceptibility to Contamination Determination,

part of this susceptibility determination. This land use includes agricultural properties. determined that the Winchester Community Water Supply's source water is susceptible to contamination. The land use within the recharge areas of the wells was analyzed as Management Sections of the Illinois EPA indicated additional sites with on-going remediation which may be of concern. Based upon this information, the Illinois EPA has community water supply wells. This potential source is an active gravel pit. In addition, information provided by the Leaking Underground Storage Tank and Remedial Project information obtained in this document there is one potential source of groundwater contamination that could pose a hazard to groundwater utilized by Winchester's To determine Winchester's susceptibility to contamination, the following document was reviewed: a Well Site Survey, published in 1995 by the Illinois EPA. Based on the

2021 Regulated Contaminants Detected

Lead and Copper

Definitions:

Action Level Goal (ALG):

Action Level (AL):

ALGs allow for a margin of safety. The level of a contaminant in drinking water below which there is no known or expected risk to health.

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a

water system must follow.

Water Quality Test Results

Definitions:

Maximum Contaminant Level Goal (MCLG):

Maximum Contaminant Level (MCL):

MCLGs allow for a margin of safety. The level of a contaminant in drinking water below which there is no known or expected risk to health.

as feasible using the best available treatment technology. The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health.

MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Maximum Residual Disinfectant Level (MRDL): that addition of a disinfectant is necessary for control of microbial contaminants. The highest level of a drinking water disinfectant allowed in drinking water. There is convincing evidence

- 1 Not all sample results may have been used for calculating the Highest Level Detected because some results may be part of an evaluation to determine where compliance sampling should occur in the future.
- ²This contaminant is not currently regulated by the USEPA. However, the state has set an MCL for this contaminant for supplies serving a population of 1,000 or more.

 ³ There is no state or federal MCL for sodium. Monitoring is required to provide information to consumers and health officials that are concerned about sodium intake due to
- dietary precautions.

Abbreviations:

n/a: not applicable

ppb: parts per billion or micrograms per liter (μg/L)

ppm: parts per million or milligrams per liter (mg/L)

pCi/L: picocuries per liter (a measure of radioactivity)

contaminants were detected the last time they were sampled for, they are included in the table along with the date that the detection occurred. Note: Some contaminants are sampled less frequently than once a year; as a result, not all contaminants were sampled during the CCR calendar year. If any of these

Note: This report includes raw, finished and distribution water sample results.
